z=0: complete 4-by-4 static-transformed response magnitudes

Rows: output reference axes; columns: input reference axes. dB relative to one recorded-coordinate ratio; command units uncalibrated.
Dotted lines: 25-80 Hz training band. D0 is an auxiliary approximate-nullspace diagnostic, not a modal identification model.

B0: nominal static / held-out LRM D0: band-optimal static / held-out LRM
