z=0: complete 4-by-4 static-transformed response phases

Each scalar FRF and each method is unwrapped independently on the full frequency grid, without model-based branch alignment.
Held-out LRM; noisy low-magnitude phase is retained. Training band: 25-80 Hz. D0 is an auxiliary diagnostic, not the modal estimator.

B0: nominal static / held-out LRM D0: band-optimal static / held-out LRM
