
z=0: nullspace response near the target mode
Held-out LRM, recorded command coordinates. This is a total observed response, not an isolated flexible-mode preservation ratio.
D0/D2 training band: 25-80 Hz. Auxiliary direct-target diagnostic; no additional tuning in the target band.
B0: nominal static
B4: prior modal pilot + delay
D0: band-optimal static
D2: band-profiled static + delay
Full measured frequency range
260-310 Hz: first plate-mode neighborhood
N to N magnitude (dB re 1 recorded-unit ratio)
Frequency (Hz)
