
z=0: scalar nullspace phase, held-out LRM
Each full frequency trace is unwrapped independently from its own first principal-value sample; no branch alignment to another method.
Low-magnitude phase may be noisy. D2 includes its causal common delay. Training band: 25-80 Hz; auxiliary diagnostic.
B0: nominal static
B4: prior modal pilot + delay
D0: band-optimal static
D2: band-profiled static + delay
Full measured frequency range
260-310 Hz: first plate-mode neighborhood
N to N independently unwrapped phase (deg)
Frequency (Hz)
