
z=0: transformed held-out LRM responses
Cross blocks show the Euclidean norm across three logical reference channels; N to N shows its magnitude.
Dotted vertical lines: 25-80 Hz training band. Command units are uncalibrated. Diagnostic, not a modal fit.
B0: nominal static
B4: prior modal pilot + delay
D0: band-optimal static
D2: band-profiled static + delay
Logical inputs to nullspace output
Nullspace input to logical outputs
Nullspace input to nullspace output
