
Antiresonance comparison: channel-dependent delays
All curves include their fitted delay phases. Model selection used training data only.
Local phase: independent unwrap, then one constant 360-deg branch shift per whole curve; no smoothing.
Experimental FRF
Without delay
Common delay
Input/output additive delays
$u_1 \to y_1$
$u_2 \to y_2$
FRF magnitude (dB)
Unwrapped phase (deg)
Frequency (Hz)
