Antiresonance detail before and after model revision

Top: FRF magnitude. Middle: locally continuous phase. Bottom: complex residual to the same validation LRM.
Phase uses whole-curve constant 360-deg branch offsets only. No smoothing; residuals use original bins.
Magnitude units are recorded output / motor-command units; physical input calibration is unconfirmed.

Validation LRM Validation Welch Before Revised

$u_1 \to y_1$

FRF magnitude (dB, recorded units)

$u_2 \to y_2$

FRF magnitude (dB, recorded units)

$u_1 \to y_1$

Unwrapped phase (deg)

$u_2 \to y_2$

Unwrapped phase (deg)

$u_1 \to y_1$

Complex residual to LRM (dB, recorded units)

Frequency (Hz)

$u_2 \to y_2$

Complex residual to LRM (dB, recorded units)

Frequency (Hz)
