Recovered-reference FRF and fixed-pole modal fit

z = 0; exploratory same-record check. The recovered-reference FRF is an estimate, not ground truth.
Physical input/output channels in recorded units; pole locations and channel delays are frozen.

Recovered-reference FRF (second half) — Fixed-pole reference-moment fit (first half)

u_1 to y_1 | u_2 to y_1 | u_3 to y_1 | u_4 to y_1

u_1 to y_2 | u_2 to y_2 | u_3 to y_2 | u_4 to y_2

u_1 to y_3 | u_2 to y_3 | u_3 to y_3 | u_4 to y_3

u_1 to y_4 | u_2 to y_4 | u_3 to y_4 | u_4 to y_4

Magnitude (dB)

Frequency (Hz)
