Joint low-frequency and flexible-response model

New fit begins at 3 Hz. Vertical line: old 25 Hz fitting limit; lower old-model curve is extrapolation.
Low-frequency reference: half-window-45 LRM. First/second 30 s are the fitting/validation split of one experiment.

Validation LRM — Old model (below 25 Hz: extrapolation) — Joint low-frequency model

$u_1 \to y_1$ $u_2 \to y_1$ $u_3 \to y_1$ $u_4 \to y_1$

$u_1 \to y_2$ $u_2 \to y_2$ $u_3 \to y_2$ $u_4 \to y_2$

$u_1 \to y_3$ $u_2 \to y_3$ $u_3 \to y_3$ $u_4 \to y_3$

$u_1 \to y_4$ $u_2 \to y_4$ $u_3 \to y_4$ $u_4 \to y_4$

Magnitude (dB, recorded output / motor-command unit)

Frequency (Hz)
