
Before/after at z = 0 mm: check-segment FRFs
Both curves are nonparametric FRF estimates, not modal fits. Original bins; no smoothing or interpolation.
The same static geometric matrices are used for Rx to Ry. A peak shift alone does not identify its physical source.
Previous check-segment FRF
New check-segment FRF
Rx → Ry (static geometric axes)
u2 → y2
u1 → y1
u4 → y4
Magnitude (dB)
Frequency (Hz)
